  - Enrollment
- Manage devices
  - Configuration
  - Compliance

Policies Notifications Retire noncompliant devices **Compliance settings** Scripts Monitor

Save Discard

These settings configure the way the compliance service treats devices. Each device evaluates these as a "Built-in Device Compliance Policy", which is reflected in device monitoring.

Mark devices with no compliance policy assigned as Not compliant

Compliance status validity period (days) 30 *

iOS compliance policy ...

iOS/iPadOS

Please select a template

Basics | Compliance settings | Actions for noncompliance | 4 Scope tags

Specify the sequence of actions on noncompliant devices

Action	Schedule (days after noncompliance)	Message template
Mark device noncompliant	Immediately	
Remotely lock the noncompliant device	Immediately	
Add device to retire list	Immediately	
Send push notification to end user	Immediately	
Send email to end user	0	None selected

Compliance helps us to check the device state

=> Attacks are not visible

Technical limitations of MDM-based security management

- Client Hardening does not protect against attack attempts
  - MDM = fundamental protection, but NOT a shield
- No visibility into attack-context correlation
- No detection of identity misuse
- No protection against zero-days

https://www.wpninjas-germany.com/
#WPNinjasGermany

Attack attempts:

The Security barrier

Layer 1 – Clientmanagement

- Hardening
- Patchmanagement

Layer 2 – Conditional Access

- Always verify Identity + Client
- Risk-based

Layer 3 – Defender XDR

- Correlation of Identities, Devices and Saas Apps
- Threat Analytics, Automatic Investigations & Response
